SOCRATIC SEMINAR ON SOCIAL ITOVATION

The aim of the Social ITovation event is to bridge people from different backgrounds and explore how IT can help deliver social innovations that can have a global impact. The event will feature social entrepreneurs, non-governmental organizations, companies that are working towards social innovation, academics, students, and social groups facing challenges. NTNU organizes this seminar connected to the EU-project «SOCRATIC» in Horizon 2020. The main goal of the project is to provide citizens and organizations a collaborative space where they can identify innovative solutions to achieve the Sustainable Development Goals set by the UN.

The keynote speakers

Yolanda Rueda Fernandez

Social entrepreneur. Founder and current President of the Cibervoluntarios Foundation, organization chosen by Google.org as one of the 50 organizations that are changing the world.

Kenth Engø-Monsen

Senior Data Scientist and leading Telenor Research's 'Big Data for Social Good'- initiative, and the social network analysis (SNA) collaboration with Harvard University.

Chair:

Letizia Jaccheri, Professor and Head of Department of Computer and Information Science, NTNU

Program Committee:

TELCO TRENDS FOR 2016 BY TELENOR RESEARCH

CUSTOMERS WILL 'CO-CREATE' SERVICES

Customers are increasingly digital savvy, demanding and empowered. This puts demands on companies to deliver superior digital customer experiences, and be more aligned with the customer's changing behaviour than ever before.

MORE IOT SERVICES WITH LPWA

Future Internet of Things (IoT) devices need low cost and low power consuming networks. Low Power Wide Area networks enable a future smart society with many new and exciting IoT services and platforms.

SOFTWARIZATION

Networks as software rather than hardware will take off as technologies such as Network Function Virtualization (NFV) and Software Defined Networking (SDN) will enable new ways of designing and operating networks.

DATA FOR SOCIAL GOOD

Telecom big data will be used more in 2016 to tangibly help society for the purpose of social good

DEEP LEARNING

As they get more deeply integrated into digital services and devices, machines will understand more digital content. We will experience this through new services, better digital assistants, search results and suggestions, and more relevant ads.

LEVELING OUT THE PLAYING FIELD

In 2016 governments and regulatory authorities will have to deal with an intensifying debate on how to adjust the traditional legal frameworks to the new competitive digital environment and a growing sharing economy

Smart University y su integración con los proyectos actuales de la UA
